PROFESSIONAL SUMMARY

Backend Engineer with 2+ years designing and shipping REST APIs and data layers for production systems. Works primarily in Python (FastAPI, Flask, Django) and Node.js over PostgreSQL, with JWT authentication, role-based access control, SQLAlchemy, Docker, and hands-on Linux deployment on Google Compute Engine behind Nginx. Backend author of a point-of-sale platform handling 100+ transactions a day and of a cloud document service holding 700+ records, owning each service end to end from schema design to deployment. Fluent English (C1), full daily overlap with US and European time zones.

PROFESSIONAL EXPERIENCE

Backend Engineer (Contract / Freelance)

Jan 2024 - Present

Independent - Remote | Clients: Calitop Services, Lo Exacto, Revolt Laptop, GEOTOP

- Designed and shipped **REST APIs in Python (FastAPI, Flask) and Node.js** backing 5 production applications, covering PostgreSQL schema design, authentication, business logic and deployment.
- Built the backend of **Boom POS**, a point-of-sale and CRM system processing **100+ sales per day** over a **500+ product inventory**: transactional sales and stock logic on PostgreSQL, exposed through Next.js API Routes and a Flask service - delivered in 2 months.
- Developed **SSP**, a FastAPI + SQLAlchemy 2 + PostgreSQL backend with **JWT authentication (python-jose)**, **bcrypt password hashing and role-based access control** across three user roles - containerized with Docker Compose, seeded via script and documented with OpenAPI / Swagger.
- Built and deployed **GEOTOP's** calibration-certificate service: a Flask application on a **self-provisioned Google Compute Engine VM behind Nginx**, storing **700+ certificates** in S3-compatible object storage, with a QR code on each instrument resolving to its current document - replacing a paper process that had no verification path.
- Containerized services with Docker and Docker Compose, **provisioned and configured Linux VMs on Google Compute Engine with Nginx as reverse proxy**, managed environment configuration and secrets, and set up CI/CD pipelines.
- Owned the complete client lifecycle in English and Spanish: requirements gathering, technical proposals, architecture, delivery and post-launch support, working directly with non-technical business owners.

SELECTED PROJECTS

SSP - Internship tracking API (FastAPI) - github.com/BastleyNait/BACK-CS-DE-LA-COM | FastAPI, SQLAlchemy 2, PostgreSQL, JWT, bcrypt, RBAC, Docker Compose, Swagger

GEOTOP - Certificate service with QR verification - github.com/BastleyNait/GEOTOP-PDF | Flask, Nginx, Google Compute Engine, S3-compatible object storage, PostgreSQL

Boom POS - Point of Sale & CRM backend - boom-pos.vercel.app | Next.js API Routes, Flask, PostgreSQL, Zustand

Course Recommender - Vector search service - github.com/BastleyNait/LAB01-04-TABD | Python, ChromaDB, Sentence-Transformers, semantic retrieval

Anemivision - On-device inference pipeline (Android) - github.com/BastleyNait/ANEMIVISION | Kotlin, TensorFlow Lite, PyTorch, model quantization

TECHNICAL SKILLS

Backend: Python, FastAPI, Flask, Django, Node.js, SQLAlchemy, REST APIs, GraphQL, JWT Authentication, RBAC, Next.js API Routes, Microservices

Databases: PostgreSQL, MongoDB, SQL, Redis, Vector Databases (ChromaDB), Schema Design

Cloud & DevOps: Google Cloud Platform (Compute Engine), Vercel, Nginx, Linux (Ubuntu), Docker, Docker Compose, CI/CD, Git, GitHub, GitHub Actions, S3-compatible Object Storage, Reverse Proxy

Frontend: React, Next.js (App Router), TypeScript, JavaScript, Tailwind CSS, Zustand, Responsive Design, Web Accessibility

Testing & Practices: Unit / Integration / End-to-End (E2E) Testing, Code Review, Agile, Scrum, Kanban, Software Architecture, Design Patterns, Clean Architecture, OWASP Top 10

EDUCATION & LANGUAGES

Systems Engineering - Universidad Nacional de San Agustín de Arequipa (UNSA), Peru

Languages: Spanish (Native) · English - C1 Advanced, professional working proficiency
